

GXP ROTEX WELD WHERE OTHERS CAN'T

With its unique extendable 360° rotating neck, the heavy duty Flexlite GXP Rotex torch reaches the welds others can't.

No matter how awkward the position, you'll never have to twist your wrist, strain your neck or get too close to the heat ever again.

Simply rotate and lock in the precise position you need, and maintain control. Extend the neck up to 70mm as you go. No need to stop. No fussy neck changes. And no need to put your body on the line.

As with all Kemppi torches, the Flexlite GXP Rotex is designed to endure and perform in the toughest conditions, while minimizing strain for the welder. It's built to thrive in heavy industry, with durable materials, steel spring bending support and an integral hanging hook.

When its time to bring the power, the Flexlite GXP Rotex will get it done. Let the torch take the strain.

Reach further with one neck

The GXP's unique design allows you to extend the neck by 70mm, giving you a more comfortable distance from the arc heat, and the ability to reach awkward positions.

360° for the perfect position

Simply rotate and lock the neck to the exact angle that works best for any position you need to weld. Let the GXP Rotex twist to the best angle, so your body doesn't have to.

Built for heavy duty

Available in models up to 400A and 500A, the Flexlite GXP Rotex is designed for heavy duty industry. Robust materials, steel bending spring, hanging hook and long-lasting consumables.
