PIPE TO PLATE FILLET WELDING

# Universal WPS for pipe to plate fillet welding

## INCLUDES 6 WELDING PROCEDURE SPECIFICATIONS FOR PIPE TO PLATE FILLET WELDING

The online package with 6 WPSs is developed for MIG/MAG welding of pipe to plate fillet welds. The package also includes WPS for pipe to plate fillet welds of 30-90 degrees.

You will be delivered a registration key that provides you with an access to [Kempfi WPS Administration site](#) where you can see your WPS documents and the WPQR documents associated with them. You can save the documents for yourself or print them.

You can buy the WPS for pipe to plate fillet welding online package (product code: 6800009) directly from Kempfi [dealers and distributors](#).

## KEY BENEFITS

### SAVINGS IN TIME

when you purchase and access  
a ready-made WPS package

### SAVINGS IN WPS CREATION

by purchasing a ready-made  
WPS package

---

## BENEFITS

- Savings in time and money
- No need to acquire special expertise
- All WPSs are suitable for all welding machine brands adhering to the standards ISO 15612 and ISO 15614
- Kemppi is the only manufacturer to offer MIG/MAG tube welding WPSs
- The WPSs are also valid when impact-strength requirements apply
- The WPSs for tube welding offer practical information on welding positions

## FEATURES

### Save time

Time is money—and now you can save it by buying the Kemppi Universal WPS package Pipe to Plate Fillet welding. We have carried out all the necessary welding procedure tests, monitored and approved by the notified body inspector, to ensure that our WPSs help you to meet the standards and requirements you need. You can now have them at your fingertips with a few simple clicks. Example calculation: When a company needs a WPS, the welding coordinator has to plan what welding procedure tests need to take place, after which the welding coordinator and the welder look for the optimal parameters. Next, the coordinator should write a pWPS, after which they can start the welding procedure test. After hours and hours of testing, WPS is ready. This takes the welding coordinator and the welder 22 hours on average. If these tests are not accepted by the inspecting parties, the procedure will start over, causing the company delays and more costs. Kemppi will provide you with a solution in less than 2 hours, saving you 90 % of the time and you can have your welders welding quicker than ever!

### Save money in WPS creation

Kemppi's Universal standard WPS package for Pipe to Plate Fillet welding can save you and your company money. We have carried out all the necessary welding procedure specification tests, monitored and approved by the notified body inspector, to ensure that our WPSs help you to meet the standards and requirements you need. Our professional welders rigorously searched for the best setups, and have used them to perform test welds for several hours, so you can enjoy the ready-made WPSs. Example calculation: A company needs two welding procedure tests for fillet welds and two for butt welds. The overall cost for carrying out the tests includes materials, testing, labor, and inspection costs. In addition, it isn't always guaranteed that these tests and procedures will be approved by the inspectors. Kemppi's Universal WPS package for Pipe to Plate Fillet welding includes all the necessary documents a company needs so you only need to buy one package. The average saving when you account for all those costs is 65 %.
